Rumor has that they wanted to prove they could get great power and economy out of the oldest technology. Hedges of power, torque mountains and economy on the par with a four cylinders with less than half the capacity. They showed up... who they were trying to show. With all emissions residues and less power, there are probably better options for a conversion. Wait, what? It's not possible. LBZ: Best 'tuneability' out of the lot, however the Allison 6-speed auto behind these could 'just' handle an extra 120 HP or so before the grenade. Yes, return quite good economy (in stock form) as well. The VE gets a marginally better economy; the P-Pump can be hurt much more and make much more power. They also took the factory lifting pump in this model. Power Figures: 240-370kW, 450-650Nm (but capable of oh much more) Expect to pay: \$1,000 for a basic engine at \$25,000 for a 800+ HP monster Common applications: Ford Falcons - BA XR6, BF XR6, FPV F6, FG XR6; Ford Territory - SY turbo models 5 QUICK BARRA PERFORMANCE TIPS Get a flash tuner: The CPU factory is not all that the easy performance Get more large injectors: The OE exceeds about 250kW Upgrade the valve springs: It is not really a performance mod, but a known weak point More fuel: Get a proper fuel pump, not the high-flow catalytic converter power unit: Replace the exhaust factory in the Ford VOO If the LS engine series is one of the most common V8 engines these days throughout theThe 5.0L OHC Ford Coyote alloy block should be one of the least common. Although the conversion of LS is one of the most common and direct to perform, for the blue oval fans, the Barra gives the LS a run for its money. The transmission line should be able to handle the engine output, so nothing with more than 30KW on your Hlux, okay? As really cheap... if you spend more than a few hundred dollars on what has been ripped off. But some NA motors are more suitable for turbocompression than others. Industrial motors: 6-BT were originally used as industrial or agricultural engines. And I'm not alone. Why is that? They can simply take the additional tension to run large numbers of dynamometer through them. See above... Barra Power, baby! They're hardly a had engine though, capable of reliable try past 7,000rpm and can be bumped up into the four-figure HP range with a few tweaks áa so if similar power from a smaller displacement is your thing, then they'll It's worth taking a look at. They are dim, safe, especially the turbo version; but for the displacement they should be pulling a lot more, and they have a lot of thirst to boot. With that bold statement in mind, it is not difficult to understand why engine conversions are so popular with four-wheel drivers. However, not all engines are built like this... so research a little before you overwhelm 40psi for consumption, okay? A LS1 installed in Holden Commodores (in Australia) makes a claimed 260kW and will use only a little more fuel in the process. So, while it can be a headache, the good news these days is that there is information everywhere for the most popular conversions.
